

# Professional Statement

My name is Kamalesh, and I am currently pursuing B.Tech in Information Technology at NIET Coimbatore. I have a deep interest in cybersecurity, and I recently started building my skills through the Google Cybersecurity Certificate on Coursera.

What fascinates me most about cybersecurity is how it protects systems, businesses, and people from threats. I am learning to perform security audits, identify vulnerabilities, use Linux commands, and write basic SQL filters — all of which are foundational to a career in this field.

My short-term goal is to build hands-on skills and earn certifications. My long-term goal is to work in an MNC or a startup that solves real-world security problems.

I believe consistency, curiosity, and smart learning can help me stand out in this field — and I'm actively building my portfolio to showcase that.

Thank you for reading.
